EasyID® ADVANCE

| EasyLABEL | EasyFORM | EasyID-MOBILE | EasyCAM | EasyREG | Downtime |

FEATURES AND BENEFITS:

- Identify patients with ease.
- Simplify patient chart/record maintenance.
- Unlimited users.
- Interfaces with most ADT Systems–McKesson, Siemens, Eclipsys, and many more.
- Replace existing embossers, saving money.
- Provide additional bar code capabilities.

EasyLABEL, a module of EasyID®ADVANCE, is the direct descendant of the original patient labeling system created in 1995. It provides an easy way to implement a bar code, patient ID system and enables the user to create ID and patient chart labels using linear and/or matrix (2-D) bar codes. It is a server based application which allows an unlimited number of users.

EasyLABEL masters the process of positive patient identification by generating bar coded labels, wristbands and ID cards to improve patient safety and drive bar code enabled systems. EasyLABEL is easy to implement and use. No programming changes are required to your existing system. Therefore, implementation is achieved with minimal impact on IT departments.
