

# EasyID® ADVANCE

EasyLABEL	EasyFORM	EasyID-MOBILE	EasyCAM	EasyREG	Downtime
-----------	----------	---------------	---------	---------	----------

#### FEATURES AND BENEFITS:

- Confirm patient identity at bedside...anywhere.
- Print labels at point-of-care.
- Interfaces with most ADT Systems—McKesson, Siemens, Eclipsys, and many more.
- Supports multiple configurations and workflows.
- Supports 2D bar codes for positive patient identification at the point of care without the expense of a wireless network.

**EasyID-MOBILE**, a module of EasyID®ADVANCE, brings positive patient identification at the point of care. It helps hospitals meet JCAHO Patient Safety Goals with multiple computer confirmed identifiers. The 2D bar codes make all of this possible without the need for costly wireless infrastructure. EasyID-MOBILE also supports the HIBC provider standards for enforcing bar code scanning rules. Furthermore, it logs all steps for HIPAA compliance and future reporting. EasyID-MOBILE can communicate wirelessly using a secure hand-held scanner, portable printer, and the host server. Using WPA2 encryption technology and the FIPS 140-2 compliant Motorola MC75A Healthcare mobile computer, all wireless data communication is transmitted securely, providing increased patient safety and security. EasyID-MOBILE can also be configured for a variety of uses depending on specific needs of each medical facility.
